Disclaimer

iWave Systems reserves the right to change details in this publication including but not limited to any Product specification without notice.

No warranty of accuracy is given concerning the contents of the information contained in this publication. To the extent permitted by law no liability (including liability to any person by reason of negligence) will be accepted by iWave Systems, its subsidiaries or employees for any direct or indirect loss or damage caused by omissions from or inaccuracies in this document.

CPU and other major components used in this product may have several silicon errata associated with it. Under no circumstances, iWave Systems shall be liable for the silicon errata and associated issues.

Trademarks

All registered trademarks, product names mentioned in this publication are the property of their respective owners and used for identification purposes only.

Certification

iWave Systems Technologies Pvt. Ltd. is an ISO 9001:2015 Certified Company.

Warranty & RMA

Warranty support for Hardware: 1 Year from iWave or iWave's EMS partner.

For warranty terms, go through the below web link,

<http://www.iwavesystems.com/support/warranty.html>

For Return Merchandise Authorization (RMA), go through the below web link,

<http://www.iwavesystems.com/support/rma.html>

Technical Support

iWave Systems technical support team is committed to provide the best possible support for our customers so that our Hardware and Software can be easily migrated and used.

For assistance, contact our Technical Support team at,

1. INTRODUCTION

1.1 Purpose

The i.MX 8M Mini or i.MX 8M Nano μ Qseven development platform incorporates i.MX 8M Mini or i.MX 8M Nano applications processor based μ Qseven SOM and Qseven Carrier board for complete validation of i.MX 8M Mini or i.MX 8M Nano SoC functionality. This document is the hardware user guide for the i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. This guide provides detailed information on the overall design and usage of the Qseven carrier board from a hardware system perspective. The details about the i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM hardware is explained in i.MX 8M Mini or i.MX 8M Nano SOM User Manual document “iW-RainboW-G34M_G37M-i.MX_8M_Mini_Nano-uQseven-SOM-HardwareUserGuide-R1.0-REL1.x.pdf”.

1.2 Overview

The μ Qseven is a versatile small form factor computer Module targeting applications that require low power, low cost and high performance.

iW-RainboW-G34D/G37D Development Platform comes with Qseven Carrier board, and i.MX 8M Mini or i.MX 8M Nano based μ Qseven SOM. The development board can be used for quick prototyping of various applications targeted by the i.MX 8M Mini or i.MX 8M Nano processor. With the 120mmx120mm Nano ITX size, Qseven carrier board is highly packed with all the necessary on-board connectors to validate the features of i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM.

1.3 List of Acronyms

The following acronyms will be used throughout this document.

Table 1: Acronyms & Abbreviations

| Acronyms | Abbreviations |
|----------|---|
| ARM | Advanced RISC Machine |
| BPP | Bits Per Pixel |
| CAN | Controller Area Network |
| CMOS | Complementary Metal-Oxide Semiconductor |
| CPU | Central Processing Unit |
| GPIO | General Purpose Input Output |
| HDMI | High-Definition Multimedia Interface |
| I2C | Inter-Integrated Circuit |
| IC | Integrated Circuit |
| JTAG | Joint Test Action Group |
| LCD | Liquid Crystal Display |
| LVDS | Low Voltage Differential Signal |

| Acronyms | Abbreviations |
|-----------------|---|
| Mbps | Megabits per sec |
| MHz | Mega Hertz |
| MSIOF | Clock-Synchronized Serial Interface with FIFO |
| NC | No Connect |
| NPTH | Non-Plated Through hole |
| PCB | Printed Circuit Board |
| PCIe | Peripheral Component Interconnect Express |
| PTH | Plated Through hole |
| PWM | Pulse Width Modulation |
| RTC | Real Time Clock |
| SDIO | Secure Digital Input Output |
| SDHI | SD Card Host Interface |
| SoC | System on Chip |
| SOM | System On Module |
| UART | Universal Asynchronous Receiver/Transmitter |
| USB | Universal Serial Bus |
| USB OTG | USB On The Go |

1.4 Terminology Description

In this document, wherever Signal Type is mentioned, below terminology is used.

Table 2: Terminology

| Terminology | Description |
|-------------|--|
| I | Input Signal |
| O | Output Signal |
| IO | Bidirectional Input/output Signal |
| CMOS | Complementary Metal Oxide Semiconductor Signal |
| DIFF | Differential Signal |
| TMDS | Transition-Minimized Differential Signalling |
| OD | Open Drain Signal |
| OC | Open Collector Signal |
| Analog | Analog Signal |
| Power | Power Pin |
| PU | Pull Up |
| PD | Pull Down |
| NA | Not Applicable |
| NC | Not Connected |

Note: Signal Type does not include internal pull-ups or pull-downs implemented by the chip vendors and only includes the pull-ups or pull-downs implemented on board.

2. ARCHITECTURE AND DESIGN – QSEVEN CARRIER BOARD

This section provides detailed information about the i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform features with high level block diagram and detailed information about each block.

2.1 i.MX 8M Mini or i.MX 8M Nano QsevenCarrier Board Block Diagram

iW-RainboW-G34D/G37D-i.MX 8M Mini or i.MX 8M Nano μ Qseven Development Kit Block Diagram

Note:
 * Not supported in i.MX 8M Nano

mktg@iwavesystems.com

iWave Systems Technologies Pvt. Ltd.

Figure 1: i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform Block Diagram

2.2 i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform Features

i.MX 8M Mini or i.MX 8M Nano Qseven Carrier board supports the following features to support various interfaces from i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM Edge connector

On Board Switches

- Power ON/OFF Switch
- Board Configuration Switch
- Reset Switch

Serial Interface Features

- Debug UART through USB Micro AB Connector
- Data UART x 1 Port through Header

High Speed Interface Features

- PCIe x 1 Port through x4 connector or Mini-PCIe connector (Not supported in Nano)

Communication Features

- 10/100/1000Mbps Ethernet through RJ45MagJack
- USB 2.0 Host x 2 Port through Dual Stack Type A Connector
- USB 2.0 Host x 1 Port through Type A Connector
- USB 2.0 OTG x 1 Port through Micro AB Connector
- SDHI (4bit) x 1 Port through Standard SD Connector
- CAN x 1 Port through Header

Audio/Video Features

- I2S Audio Codec with 3.5mm Audio IN and OUT jack
- 7" RGB LCD Connector through LVDS to RGB transmitter with Capacitive Touch
- HDMI X 1 Port through Type A Connector

Additional Features

- SPI Flash (MSIOF0 with SS#0)
- RTC Coin Cell holder
- Fan Header
- 20-Pin JTAG Header (Optional)¹

Carrier board Expansion Connectors

- Carrier board Expansion Connector
 - SPI (MSIOF0 with SS1#) x 1 Port
 - I2C x 3 Ports
 - GPIOs & Power

General Specification

- Power Supply : 12V, 2A Power Input Jack
- Form Factor : 120mm X 120mm Nano ITX

¹JTAG connector is supported always in Qseven carrier board hardware. If Qseven SOM supports JTAG interface on Qseven Edge connector, then JTAG can be tested in Qseven carrier board. In i.MX 8M Mini or i.MX 8M Nano SoC based μ Qseven SOM, JTAG is not supported in Qseven Edge connector by default.

2.3 Qseven MXM Connector

i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports 230Pin Qseven MXM Edge mating connector for μ Qseven SOM attachment. This standard 230-pin robust connector is capable of handling high-speed serialized signals and can be used for size constrained embedded applications. This Qseven MXM Edge mating connector (J11) is physically located at the top of the board as shown below.

Figure 2: Qseven MXM Connector

Table 3: Qseven MXM Connector Pin Out

| Pin No. | Qseven MXM Connector Pin Name | Signal Name | CPU Ball Name/ Pin Number | Signal Type/ Termination | Description |
|---------|-------------------------------|---------------------|------------------------------|-----------------------------|---|
| 1 | GND | GND | NA | Power | Ground. |
| 2 | GND | GND | NA | Power | Ground. |
| 3 | GBE_MDI3- | GPHY_DTXXM | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 3 negative. This pin is connected to RJ45 Magjack J22. |
| 4 | GBE_MDI2- | GPHY_CTXXM | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 2 negative. This pin is connected to RJ45 Magjack J22. |
| 5 | GBE_MDI3+ | GPHY_DTXXP | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 3 positive. This pin is connected to RJ45 Magjack J22. |
| 6 | GBE_MDI2+ | GPHY_CTXXP | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 2 positive. This pin is connected to RJ45 Magjack J22. |
| 7 | GBE_LINK100# | GPHY_LINK10_100_LED | NA | I, 3.3V CMOS | 100Mbps Ethernet link status LED. This pin is connected to D15 Green LED. |
| 8 | GBE_LINK1000# | GPHY_LINK_1000_LED | NA | I, 3.3V CMOS | Gigabit Ethernet link status LED. This pin is connected to D16 Green LED. |
| 9 | GBE_MDI1- | GPHY_BTXXM | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 1 negative. This pin is connected to RJ45 Magjack J22. |
| 10 | GBE_MDI0- | GPHY_ATXXM | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 0 negative. This pin is connected to RJ45 Magjack J22. |
| 11 | GBE_MDI1+ | GPHY_BTXXP | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 1 positive. This pin is connected to RJ45 Magjack J22. |
| 12 | GBE_MDI0+ | GPHY_ATXXP | NA | IO, DIFF | Gigabit Ethernet MDI differential pair 0 positive. |

| Pin No. | Qseven MXM Connector Pin Name | Signal Name | CPU Ball Name/ Pin Number | Signal Type/ Termination | Description |
|---------|-------------------------------|------------------------|------------------------------|-----------------------------|---|
| | | | | | This pin is connected to RJ45 Magjack J22. |
| 13 | GBE_LINK# | GPHY_LINK_1000_LED | NA | I, 3.3V CMOS | Gigabit Ethernet link status LED. This pin is connected to RJ45 Magjack J22. |
| 14 | GBE_ACT# | GPHY_ACT_LED | NA | I, 3.3V CMOS | Gigabit Ethernet Activity status LED. This pin is connected to RJ45 Magjack J22. |
| 15 | GBE_CTREF | VDVDH_GPHY1 | NA | Power | This pin is connected to RJ45 Magjack J22 centre tap pins through resistor and default populated in carrier board. |
| 16 | SUS_S5# | SUS_S5_Q7 | NA | I, 3.3V CMOS | S5 State. This pin is connected to indication LED D9. <i>Note: This pin is optionally connected to Expansion Connector3 (J14) 8th Pin.</i> |
| 17 | WAKE# | NC | NA | NA | NC in i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM. This pin is connected to Push button (SW5) in carrier board. |
| 18 | SUS_S3# | SUS_S3_Q7 | NA | I, 3.3V CMOS | S3 state. This pin is connected to indication LED D12. <i>Note: This pin is optionally connected to Expansion Connector3 (J14) 7th Pin.</i> |
| 19 | SUS_STAT# | GPIO_SD1_LED(GPIO5_27) | UART3_TXD/ D18 | I, 3.3V CMOS | Suspend Status. This pin is connected to indication LED D10. <i>Note: This pin is optionally connected to Expansion Connector3 (J14) 10th Pin.</i> |
| 20 | PWRBTN# | PWRBTN# | ONOFF/A25 | O, 3.3V CMOS | Power Button output. This pin is connected to Push button (SW3) in the carrier board used for SOM |

| Pin No. | Qseven MXM Connector Pin Name | Signal Name | CPU Ball Name/ Pin Number | Signal Type/ Termination | Description |
|---------|-------------------------------|-------------|------------------------------|-----------------------------|--|
| | | | | | On/Off control. |
| 21 | GPII1 | GPII_1 | NA | O, 3.3V CMOS | This pin is connected to Push button (SW7) in carrier board. P5 Output of SOM I/O Expander |
| 22 | GPII0 | GPII_0 | NA | O, 3.3V CMOS | This pin is connected from 8bit DIP switch (SW2) 3 rd position in carrier board. P4 Output of SOM I/O Expander |
| 23 | GND | GND | NA | Power | Ground. |
| 24 | GND | GND | NA | Power | Ground. |
| 25 | GND | GND | NA | Power | Ground. |
| 26 | PWGIN | PWRGIN | NA | O, 5V CMOS/ 10K PU | Power Good Output. |
| 27 | GPII2 | GPII_2 | NA | O, 3.3V CMOS | This pin is connected from 8bit DIP switch (SW2)2 nd position in carrier board. P6 Output of SOM I/O Expander |
| 28 | RSTBTN# | RSTBN | NA | O, 3.3V CMOS | Active low Reset button Output. This pin is connected to Push button SW4 in carrier board for reset generation. Note: This pin is optionally connected to Expansion Connector3 (J14) 12 th Pin. |
| 29 | SATA0_TX+ | NC | NA | - | NC. |
| 30 | SATA1_TX+ | NC | NA | - | NC. |
| 31 | SATA0_TX- | NC | NA | - | NC. |
| 32 | SATA1_TX- | NC | NA | - | NC. |
| 33 | SATA_ACT# | NC | NA | - | NC. |
| 34 | GND | GND | NA | Power | Ground. |

Note:

1. PCIe is not supported in i.MX 8M Nano SoC

2.4 On Board Switches

2.4.1 Power ON/OFF Switch

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board has power ON/OFF switch (SW1) to control the Main Power Input On/Off functionality. This power ON/OFF switch is physically located at the top of the board as shown below.

Figure 3: Power ON/OFF Switch

2.4.2 Board Configuration Switch

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform has one 8bit Board configuration switch (SW2) to configure board specific feature setting. Each bit of this switch is used to select the different features or modes. This Board configuration switch is physically located at the top of the board as shown below.

Figure 4: Board Configuration Switch

The functionality of Board configuration switch (SW2) of the carrier board is explained in the following table. All the bits of Board configuration switch are not used in i.MX 8M Mini or i.MX 8M Nano Development platform and so only the required bits are explained with default setting highlighted.

Table 4: Board Configuration Switch

| SW2 Bits | SW2 Bit Name | Description | |
|----------|---------------|---|---|
| | | OFF | ON |
| 1 | BIOS_DSIABLE# | - | - |
| 2 | BATLOW# | - | - |
| 3 | LID_BTN# | - | - |
| 4 | USB_SELECT | - | USB 2.0 lanes is connected to Mini PCIe Connector |
| 5 | CODEC_SELECT | - | - |
| 6 | PCIe_SELECT | PCIe channel0 is connected to Mini-PCIe Slot. | PCIe channel0 is connected to PCIe4 Slot. |
| 7 | DEBUG_SELECT | - | Debug Port is selected as UART. |
| 8 | USB_ID | USB0 acts as Host mode or Device mode based on the connected cable in USB MicroAB connector (J2). | USB0 is forced to Host Mode. |

2.4.3 Reset Switch

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports Push button switch (SW4) to reset the i.MX 8M Mini or i.MX 8M Nano SoC. “RSTBTN” signal of Qseven MXM connector is directly connected from Reset Push button switch. This Reset Push button switch (SW4) is physically located at the top of the board as shown below.

Figure 5: Reset Switch

2.5 Serial Interface Features

2.5.1 Debug UART Port

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports debug interface through CPU's UART4 interface. This UART4 signals from Qseven MXM connector is connected to UART to USB Converter "FT232RQ" and to USB Micro AB Connector (J3). This USB Micro AB Connector can be used for Debug purpose which is physically located at the top of the board as shown below.

Figure 6: Debug UART

As per Qseven specification version 2.1, Debug UART interface and JTAG interface share the same pins in Qseven Edge connector and so either one interface only can be used at a time. The required debug interface can be selected by setting the 7th bit of Board configuration switch (SW2) to Debug UART Mode.

2.5.2 Data UART Header

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports full functional Data UART interface through CPU's UART2 interface. This UART2 signals from Qseven MXM connector is connected directly to 6pin Header (J1) for easy accessibility. This Data UART header is physically located at the top of the board as shown below.

Number of Pins : 6

Connector Part number : 5-146280-6 from TE Connectivity

Mating Connector : 534237-4 from TE Connectivity

Figure 7: Data UART Header

Table 5: Data UART Header Pin Out

| Pin No | Pin Name | Signal Name | Signal Type/ Termination | Description |
|--------|-----------|-----------------------|-----------------------------|---------------------------------------|
| 1 | GND | GND | Power | Ground. |
| 2 | UART_CTS# | UART2_RTS_B(SAI3_RXD) | O, 3.3V CMOS | UART2 interface Clear to Send signal. |
| 3 | VCC_3V3 | VCC_3V3 | O, 3.3V Power | 3.3V Supply Voltage. |
| 4 | UART_RXD | UART2_RX(SAI3_TXFS) | I, 3.3V CMOS | UART2 interface Receive signal. |
| 5 | UART_TXD | UART2_TX(SAI3_TXC) | O, 3.3V CMOS | UART2 interface Transmit signal. |
| 6 | UART_RTS# | UART2_CTS_B(SAI3_RXC) | I, 3.3V CMOS | UART2 interface Ready To Send signal. |

2.6 High Speed Interface Features

2.6.1 PCIe Channel0 Port

The i.MX 8M Mini Qseven Development platform supports one PCI Express Gen2.0 lane through CPU's PCIe0 interface. PCIe reference clock from Qseven MXM connector is connected to two output clock buffer and then connected to PCIe4 connector and Mini PCIe connector for clock reference.

The PCIe channel0 signals of Qseven MXM connector is connected to 1:2 Multiplexer/Demultiplexer switch and then one output of this Multiplexer/Demultiplexer switch is connected to PCIe4 connector and other one to Mini-PCIe connector. The selection between PCIe4 connector and Mini-PCIe connector can be done by setting the 6th bit of Board configuration switch (SW2) to appropriate position.

If the 6th bit of Board configuration switch is set to ON position, then PCIe channel0 of Qseven MXM connector is connected to PCIe4 connector which is physically located at the top of the board as shown below.

Figure 8: PCIe4 Connector

Table 6: PCIe4 Connector Pin Out

Note: PCIe is not supported in i.MX 8M Nano SoC.

2.7 Communication Interface Features

2.7.1 Gigabit Ethernet Port

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports Ethernet interface through CPU's ENET interface which supports 100/1000Mbps Ethernet. The Ethernet PHY output signals from Qseven MXM connector is directly connected to RJ45 Magjack (J22). Also, it supports Speed (Yellow) and Link/Activity (Green) LED indications on RJ45 Magjack. This RJ45 Magjack combo connector is physically located at the top of the board as shown below.

Figure 10: RJ45 Magjack

2.7.2 USB2.0 Ports (Host)

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports three USB2.0 High Speed Host Type-A connector. The CPU's USB2 channel is to edge connector connected from interface is expanded to dual USB host ports through USB HUB on i.MX 8M Mini or i.MX 8M Nano Qseven SOM and available in USB2.0 Port0 and Port3 signals of Qseven MXM connector. These two USB2.0 Port0 and Port3 host ports from the Qseven MXM connector is directly connected to USB2.0 TypeA combo connector (J22) and top port of dual stack USB3.0 TypeA connector (J23) respectively.

The VBUS power of USB2.0 Port0 connector is connected through current limit power switches which limits the current above 500mA. If connected USB2.0 device takes more than 500mA current, this power switch limits the current to constant mode and sends the over current indication signal to the over current indicator pin of Qseven MXM connector USB port 0 & 1 (86th Pin).

The VBUS power of USB2.0 Port3 connector is connected through current limit power switches which limits the current above 1000mA. If connected USB2.0 device takes more than 1000mA current, this power switch limits the current to constant mode and sends the over current indication signal to the over current indicator pin of Qseven MXM connector USB port 4 (80th Pin).

Figure 11: USB2.0 Port0 (Host)

Figure 12: USB2.0 Port3 (Host)

Table 8: Dual stack USB 3.0 Connector Pin Out (Top port)

| Pin No | Pin Name | Signal Name | Signal Type/ Termination | Description |
|--------|----------|----------------|-----------------------------|--|
| 10 | VCC_5V | VBUS | O, 5V Power | 5V Supply Voltage. |
| 11 | USB_DM | USB_HUB2OUT_DM | IO, DIFF | USB2.0 Host Port3 data negative of Qseven MXM connector. |
| 12 | USB_DP | USB_HUB2OUT_DP | IO, DIFF | USB2.0 Host Port3 data positive of Qseven MXM connector. |
| 13 | GND | GND | Power | Ground. |
| 14 | USB_RXN | NC | - | NC. |
| 15 | USB_RXP | NC | - | NC. |
| 16 | GND | GND | Power | Ground. |
| 17 | USB_TXN | NC | - | NC. |
| 18 | USB_TXP | NC | - | NC. |

2.7.3 USB2.0 Port1 (OTG)

The i.MX 8M Mini or i.MX 8M Nano Qseven Development support USB2.0 High Speed OTG interface through i.MX 8M Mini or i.MX 8M Nano SOM SoC's USB0 interface. This USB2.0 Port1 signals of Qseven MXM connector is directly connected to USB2.0 MicroAB connector (J2). This port can be used as USB OTG functionality which supports USB host and USB device based on USB ID pin status. This USB ID pin is also connected to DIP switch (SW2)8th position and can be used to force this port as USB host alone by setting to ON position. When the DIP switch (SW2)8th position is OFF position, either Host or device functionality can be set based on the USB ID pin status.

The VBUS power of this USB2.0 connector is connected through current limit power switch which can be used to switch On/Off the power based on the device or Host and also limits the current above 500mA in host mode. The connected Qseven SOM detects the USB functionality through USB ID pin and controls the power using the USB_DRIVE_VBUS pin (56th pin) of Qseven MXM connector. In Host mode, USB_DRIVE_VBUS should drive high to enable the power to the connector and in device mode, USB_DRIVE_VBUS should drive low to disable the power to the connector.

If connected USB2.0 device takes more than 500mA current, current limit power switch limits the current to constant mode and sends the over current indication signal to the over current indicator pin of Qseven MXM connector USB port 0 & 1. This USB2.0 OTG connector is physically located at the top of the board as shown below.

Figure 13: USB2.0 Port1 (OTG)

Note: In i.MX 8M Nano SOC USB2.0 OTG is available only in flash mode

2.7.4 SDIO Port

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports SDIO interface through CPU's USDHC2 interface. This USDHC2 signals from Qseven MXM connector is connected to SD/MMC connector (J30) to support Standard SD interface. This connector supports up to 4-bit data transfer with card detect and write protect.

The main power to SD/MMC connector is 3.3V and it is connected through power switch to support power enable/disable feature. This power enable/disable is controlled from the SDIO_PWR# pin of Qseven MXM connector. This SD/MMC connector (J30) is physically located at the bottom of the board as shown below.

Figure 14: SD/MMC Connector

2.7.5 CAN Header

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports CAN interface by using on SOM SPI to CAN controller. CPU's ECSPi2 interface is connected to MCP2518FD to support CAN over Qseven Edge connector. This CAN interface signals from Qseven MXM connector (pins 129th& 130th) is connected to CAN Bus transceiver "SN65HVD230DR" and to 6pin custom CAN header (J20). Mode select pin (Rs) of the CAN Bus transceiver is connected to GPIO4 (189th Pin) of the Qseven MXM connector. This CAN header is physically located at the top of the board as shown below.

Number of Pins : 6

Connector Part number : 53047-0610 from Molex

Mating Connector : 0510210600 from Molex with crimping pins

Figure 15: CAN Header

Table 9: CAN Header Pin Out

| Pin No | Pin Name | Signal Name | Signal Type /Termination | Description |
|--------|----------|-------------|--------------------------|--|
| 1 | VCC_5V | VCC_5V_CAN | O, 5V Power | 5V Supply Voltage. |
| 2 | VCC_12V | NC | - | NC. <i>Note: Optionally connected to on board 12V through resistor and not populated.</i> |
| 3 | CANL | CANL | IO, DIFF | CAN Differential negative. |
| 4 | GND | GND | Power | Ground. |
| 5 | CANH | CANH | IO, DIFF | CAN Differential positive. |
| 6 | GND | GND | Power | Ground. |

2.8 Audio/Video Features

2.8.1 Audio IN&OUT

The i.MX 8M Mini or i.MX 8M Nano Qseven Development platform supports Audio In and Out through CPU's SAI5 interface which can support I2S format. This four wire I2S signals from Qseven MXM connector is connected to I2S Audio Codec "SGTL5000" to support Headphone Stereo output and Mono Mic input which is supported through 3.5mm Jack J5 and J6 correspondingly. Also, Headphone detect and Mic detect is supported through Qseven MXM connector pin 188th & 187th Pin correspondingly. These Audio Jacks are physically located at the top of the board as shown below.

Figure 16: Audio IN/OUTJack

2.8.2 7" LCD with Capacitive Touch

i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports 7inch, 18bpp RGB LCD “ETM070001ADH6” from Emerging Display Technologies Corporation (EDT) with capacitive touch panel from MIPI_DSI to LVDS/HDMI Bridge “LT8912B” from Lontium Semiconductor and is available on the LVDS0(Primary channel) port of the Qseven MXM connector. LVDS transmitter (DS90CF384A) in carrier board which converts LVDS Interface signals to RGB and connects to RGB LCD connector (J8).This RGB LCD connector (J8) is physically located at the top of board as shown below.

This RGB LCD’s power enable and backlight enable is connected from LVDS_PPEN (111th pin) & LVDS_BLEN (112th pin) of Qseven MXM connector which is i.MX 8M Mini or i.MX 8M Nano SOC’s GPIO pins “AG9” and “AF8” respectively. Also, RGB LCD’s brightness is controlled from LVDS_BLT_CTRL (123rd pin) of Qseven MXM connector which is i.MX 8M Mini or i.MX 8M Nano SOC’s (AF9).

Figure 17: RGB LCD Connector

This RGB LCD also supports capacitive touch panel. The touch interrupt from capacitive touch controller is connected to GPIO0 (185th pin) of Qseven MXM connector which is i.MX 8M Mini or i.MX 8M Nano SOC's GPIO pin "E14". This Capacitive Touch Connector (J12) is physically located at the top of board as shown below.

Figure 18: Cap Touch Connector Connector

Table 11: Capacitive Touch Connector Pin Out

| Pin No | Pin Name | Signal Name | Signal Type / Termination | Description |
|--------|----------|---------------------|---------------------------|-----------------------------|
| 1 | VSS1 | GND | Power | Ground. |

| 10 | VSS | GND | Power | Ground. |

2.8.3 HDMI Port

i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports HDMI display output through MIPI_DSI to LVDS/HDMI Bridge “LT8912B” from Lontium semiconductor and is available on the TMDS port of the Qseven MXM connector. This TMDS signals from Qseven MXM connector is connected to HDMI connector with ESD protection circuit in the i.MX 8M Mini or i.MX 8M Nano Qseven carrier board.

HDMI connector (J24) is physically located on top of the board as shown below.

Figure 19: HDMI Connector

2.9 Additional Features

2.9.1 SPI Flash

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports SPI Flash through i.MX 8M Mini or i.MX 8M Nano Qseven SOC's ESCPI1 interface. This SPI interface signals from Qseven MXM connector is connected to SPI Flash "SST25VF016B-50" in the Qseven carrier board and operating at 3.3V Level.

2.9.2 RTC Coin Cell Holder

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports Coin Cell Holder to connect "2032" series coin cell. This coin cell voltage is connected to Qseven SOM for RTC back up voltage when VCC main power is off. This Coin Cell Holder (J18) is physically located at the top of the board as shown below.

Figure 20: Coin Cell Holder

2.9.3 Fan Header

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board supports 6pin Fan Header (J19) to connect the Fan if required. The “FAN_PWMOUT” signal of Qseven MXM connector is connected to Fan header to control the speed of the Fan. This Fan Header (J19) is physically located at the top of the board as shown below.

Number of Pins : 6

Connector Part number : 53047-0610 from Molex

Mating Connector : 0510210600 from Molex with crimping pins

Figure 21: Fan Header

Table 12: Fan Header Pin Out

| Pin No | Pin Name | Signal Name | Signal Type /Termination | Description |
|--------|----------|--------------------|--------------------------|---------------------------|
| 1 | VCC | VCC_12V | O, 12V Power | 12V Supply Voltage. |
| 2 | PWM | PWM2_OUT(I2C4_SCL) | O, 3.3 CMOS | Fan Speed control. |
| 3 | GND | GND | Power | Ground. |
| 4 | NC | NC | - | - |
| 5 | FAN_PWR | VCC_FAN | O, Power | Controlled Power for Fan. |
| 6 | GND | GND | Power | Ground. |

2.9.4 JTAG Header (Optional)

A Standard 20-pin ARM JTAG Header is available in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board for debug purpose. JTAG signals from Qseven MXM connector is connected to JTAG Header (J16) through 3.3V level Buffer. This JTAG Header (J16) is physically located at the top of the board as shown below.

As per Qseven specification version 2.1, Debug UART and JTAG interfaces share the same pins in Qseven Edge connector. Hence either debug UART or JTAG interface can be used at a time. By default, Debug UART is supported in the i.MX 8M Mini or i.MX 8M Nano Qseven SOM and hence JTAG connector on i.MX 8M Mini or i.MX 8M Nano Qseven carrier board cannot be used for debugging.

Figure 22: JTAG Header

Table 13: JTAG Header Pin Out

| Pin No | Pin Name | Signal Name | Signal Type /Termination | Description |
|--------|------------|-------------|--------------------------|-------------------------|
| 1 | VCC | VCC_3V3 | O, 3.3V Power | VREF reference Voltage. |
| 2 | VCC | VCC_3V3 | O, 3.3V Power | Supply Voltage. |
| 3 | JTAG_TRSTB | JTAG_TRSTB | I, 3.3V CMOS | JTAG test reset signal. |
| 4 | GND | GND | Power | Ground. |
| 5 | JTAG_TDI | JTAG_TDI | I, 3.3V CMOS | JTAG test data Input. |
| 6 | GND | GND | Power | Ground. |
| 7 | JTAG_TMS | JTAG_TMS | I, 3.3V CMOS/ 10K PU | JTAG test mode select. |
| 8 | GND | GND | Power | Ground. |
| 9 | JTAG_TCK | JTAG_TCK | I, 3.3V CMOS/ 10K PD | JTAG test clock. |
| 10 | GND | GND | Power | Ground. |
| 11 | - | - | 10K PD | - |
| 12 | GND | GND | Power | Ground. |
| 13 | JTAG_TDO | JTAG_TDO | O, 3.3V CMOS | JTAG test data Output. |
| 14 | GND | GND | Power | Ground. |
| 15 | RSTBN | RSTBN | I,3.3V CMOS/ 10K PU | Reset Signal. |
| 16 | GND | GND | Power | Ground. |
| 17 | NC | NC | - | NC. |
| 18 | GND | GND | Power | Ground. |
| 19 | - | - | 10K PD | - |
| 20 | GND | GND | Power | Ground. |

2.10 Carrier Board Expansion Connectors

Since SOM Expansion Connectors are not present Carrier Board Expansion Connectors-1 and 2 are NC.

Figure 23: Carrier Board Expansion Connectors

Table 14: Expansion Connector3 Pin Out

| Pin No | Signal Name | Signal Type / Termination | Description |
|--------|-----------------------|---------------------------|---|
| 1 | GND | Power | Ground. |
| 2 | GND | Power | Ground. |
| 3 | GND | Power | Ground. |
| 4 | GND | Power | Ground. |
| 5 | GND | Power | Ground. |
| 6 | GND | Power | Ground. |
| 7 | SUS_S3_Q7 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected from Qseven MXM connector 18th pin.</i> |
| 8 | SUS_S5_Q7 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected from Qseven MXM connector 16th pin.</i> |
| 9 | Q7_GPIO7(GPIO1_08) | IO, 3.3V CMOS | Qseven General purpose Input/Output7. <i>Note: This pin is connected to GPIO1_08 GPIO of i.MX 8M Mini or i.MX 8M Nano SoC through Qseven MXM connector 192nd pin.</i> |
| 10 | SUS_STAT_Q7 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected from Qseven MXM connector 19th pin.</i> |
| 11 | SMB_ALERT_B(GPIO1_15) | IO, 3.3V CMOS | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to GPIO1_15 GPIO of i.MX 8M Mini or i.MX 8M Nano SoC through Qseven MXM connector 64th pin.</i> |
| 12 | RSTBN | O, 3.3V CMOS | Active low Reset button Output. <i>Note: This pin is connected to Qseven MXM connector 28th pin.</i> |
| 13 | GND | Power | Ground. |
| 14 | GND | Power | Ground. |
| 15 | WDOUT | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 72nd pin.</i> |
| 16 | WAKE# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 17th pin.</i> |
| 17 | WDTRIG# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. |

| Pin No | Signal Name | Signal Type / Termination | Description |
|-----------|--------------|---------------------------|--|
| | | | <i>Note: This pin is connected to Qseven MXM connector 70th pin.</i> |
| 18 | GND | Power | Ground. |
| 19 | LVDS_BLC_DAT | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 126th pin.</i> |
| 20 | THRM# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 69th pin.</i> |
| 21 | LVDS_BLC_CLK | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 128th pin.</i> |
| 22 | SLP_BTN# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 21st pin.</i> |
| 23 | RSVD-DP1 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 132nd pin.</i> |
| 24 | PWRBTN# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 20th pin.</i> |
| 25 | RSVD-DP2 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 134th pin.</i> |
| 26 | GND | Power | Ground. |
| 27 | GND | Power | Ground. |
| 28 | LID_BTN# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 22nd pin.</i> |
| 29 | RSVD-DP3 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 144th pin.</i> |
| 30 | BATLOW# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. |

| Pin No | Signal Name | Signal Type / Termination | Description |
|--------|--------------------|---------------------------|---|
| | | | <i>Note: This pin is connected to Qseven MXM connector 27th pin.</i> |
| 31 | RSVD-DP4 | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 146th pin.</i> |
| 32 | BIOS_DISABLE# | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 41st pin.</i> |
| 33 | GND | Power | Ground. |
| 34 | Q7_GPIO1(GPIO1_05) | IO, 3.3V CMOS/ 10K PU | Qseven General Purpose Input/Output1. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO1_05 through Qseven MXM connector 186th pin through default populated resistor.</i> <i>Note: Also, this pin is connected to Mini PCIe connector (J26) 20th pin through default populated resistor.</i> |
| 35 | I2C3_SDA | IO, 3.3V CMOS OD | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to I2C3_SDA line of i.MX 8M Mini or i.MX 8M Nano SoC through Qseven MXM connector 125th pin.</i> |
| 36 | Q7_GPIO0(GPIO5_22) | IO,3.3V CMOS/ 10K PU | Qseven General Purpose Input/Output0. This pin is connected to Capacitive Touch Connector and Resistive Touch Controller for touch interrupt. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO pin GPIO5_22 through Qseven MXM connector 185th pin through default populated resistor.</i> |
| 37 | I2C3_SCL | O, 3.3V CMOS OD | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to I2C3_SCL line of i.MX 8M Mini or i.MX 8M Nano SoC through Qseven MXM connector 127th pin.</i> |
| 38 | GND | Power | Ground. |
| 39 | DP_HPDP# | - | Not used in to i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is optionally connected to to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO5_13 through Qseven MXM connector</i> |

| Pin No | Signal Name | Signal Type / Termination | Description |
|--------|---------------------|---------------------------|--|
| | | | 154 th pin. |
| 40 | Q7_GPIO6(GPIO5_25) | IO, 3.3V CMOS/ 10K PU | Qseven General purpose Input/Output6. This pin is used to enable the LVDS display Power. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO5_25 through the Qseven MXM connector's 191stpin through default populated resistor.</i> |
| 41 | Q7_GPIO3(GPIO1_06) | IO, 3.3V CMOS/ 10K PU | Qseven General purpose Input/Output3. This pin is connected from Audio Out Jack for Headphone detect. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO1_06 through Qseven MXM connector 188thpin through default populated resistor.</i> |
| 42 | GPIO_RESET(GPIO5_2) | O, 3.3V CMOS | Touch Panel Reset. This pin is connected to Capacitive touch panel connector for reset. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO5_2 through Qseven MXM connector 61stpin through default populated resistor.</i> |
| 43 | GND | Power | Ground. |
| 44 | Q7_GPIO5(GPIO1_07) | IO, 3.3V CMOS | Qseven General purpose Input/Output5. This pin is connected to control the LVDS Backlight Power. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO1_07 through Qseven MXM connector 190thpin through default populated resistor.</i> |
| 45 | Q7_GPIO2(GPIO5_23) | IO, 3.3V CMOS/ 10K PU | Qseven General purpose Input/Output2. This pin is connected from Audio IN Jack for Headphone Mic detect. <i>Note: This pin is also connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO5_23 through Qseven MXM connector 187thpin through default populated resistor.</i> |
| 46 | ECSPI1_MISO | I, 3.3V CMOS | SPI Master In Slave Out. This Pin is used for On Board SPI Flash. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's ECSPI1_MISO line through Qseven MXM connector 201stpin.</i> |

| Pin No | Signal Name | Signal Type / Termination | Description |
|--------|----------------------------|---------------------------|--|
| 47 | Q7_GPIO4(GPIO5_24) | IO, 3.3V CMOS | Qseven General purpose Input/Output4. This pin is connected to CAN0 Transceiver Power down control. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO5_24 through Qseven MXM Connector 189th pin.</i> |
| 48 | ECSPI1_MOSI | O, 3.3V CMOS | SPI Master Out Slave In. This pin is used for On Board SPI Flash. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's ECSP1_MOSI line through Qseven MXM connector 199th pin.</i> |
| 49 | GPIO_ECSP1_SS1 | I, 3.3V CMOS | SPI Chip Select2. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO_ECSP1_SS1 line through Qseven MXM connector 202nd pin.</i> |
| 50 | GND | Power | Ground. |
| 51 | ECSP1_SCLK | I, 3.3V CMOS | SPI Clock. This Pin is used for On Board SPI Flash. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's ECSP1_SCLK line through Qseven MXM connector 203rd pin.</i> |
| 52 | DP_AUX+ | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 138th pin.</i> |
| 53 | GPIO_THRMTRIP_Q7(GPIO1_14) | I, 3.3V CMOS | Connected to LED (D11) through buffer in carrier board for thermal trip indication. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's GPIO line GPIO1_14 through Qseven MXM connector 71st pin.</i> |
| 54 | DP_AUX- | - | Not used in i.MX 8M Mini or i.MX 8M Nano Qseven carrier board. <i>Note: This pin is connected to Qseven MXM connector 140th pin.</i> |
| 55 | GND | Power | Ground. |
| 56 | GND | Power | Ground. |
| 57 | VCC_3V3 | O, 3.3V Power | 3.3V Supply Voltage. |
| 58 | VCC_1V5 | O, 1.5V Power | 1.5V Supply Voltage. |
| 59 | VCC_3V3 | O, 3.3V Power | 3.3V Supply Voltage. |
| 60 | VCC_1V5 | O, 1.5V Power | 1.5V Supply Voltage. |
| 61 | GND | Power | Ground. |
| 62 | GND | Power | Ground. |
| 63 | VCC_5V | O, 5V Power | 5V Supply Voltage. |

| Pin No | Signal Name | Signal Type / Termination | Description |
|--------|-------------|---------------------------|--|
| 64 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 65 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 66 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 67 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 68 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 69 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 70 | VCC_5V | O, 5V Power | 5V Supply Voltage. |
| 71 | GND | Power | Ground. |
| 72 | GND | Power | Ground. |
| 73 | GND | Power | Ground. |
| 74 | GND | Power | Ground. |
| 75 | GND | Power | Ground. |
| 76 | GND | Power | Ground. |
| 77 | I2C2_SCL | O, 3.3V OD | I2C2 clock. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's I2C2_SCL line through Qseven MXM Connector 60th pin through default populated resistor.</i> |
| 78 | I2C3_SCL | O, 3.3V OD | I2C3 clock. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's I2C3_SCL line through Qseven MXM Connector 66th pin through default populated resistor.</i> |
| 79 | I2C2_SDA | IO, 3.3V OD | I2C2 Data. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's I2C2_SDA line through Qseven MXM Connector 62nd pin through default populated resistor.</i> |
| 80 | I2C3_SDA | IO, 3.3V OD | I2C3 Data. <i>Note: This pin is connected to i.MX 8M Mini or i.MX 8M Nano SoC's I2C3_SDA line through Qseven MXM Connector 68th pin through default populated resistor.</i> |

3. TECHNICAL SPECIFICATION

This section provides detailed information about the i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board technical specification with Electrical, Environmental and Mechanical characteristics.

3.1 Electrical Characteristics

3.1.1 Power Input Requirement

The i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board is designed to work with a +12V external power and uses on board voltage regulators for internal power management. 12V power input from an external power supply is connected to the Qseven Carrier Board through Power Jack (J4). This 2.5mm x 6.5mm barrel connector Jack should fit standard DC Plugs with an inner dimension of 2.5mm and an outer dimension of 5.5mm (DC Plug Centre Pin is Positive). This connector is physically placed at the top of the board as shown below.

Figure 24: Power Jack

Table 15: Power Jack Pin Out

| Pin No | Pin Name | Signal Name | Signal Type / Termination | Description |
|--------|----------|-------------|---------------------------|-----------------------|
| 1 | VCC | VCC_12V | 12V, Power | Input Supply Voltage. |
| 2 | GND | GND | Power | Ground. |
| 3 | GND | GND | Power | Ground. |

The below table provides the Power Input Requirement of i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board.

Table 16: Power Input Requirement

| Sl. No. | Power Rail | Min (V) | Typical (V) | Max(V) | Max Input Ripple |
|---------|-----------------------|---------|-------------|--------|------------------|
| 1 | VCC_12V ¹ | 11.75V | 12V | 12.25V | ±50mV |
| 2 | VRTC_3V0 ² | 2.8V | 3V | 3.3V | ±20mV |

¹ i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board is designed to work with 12V, 2A input power from external Power adapter.

² This voltage is from Coin cell holder and used as backup power source to RTC circuit of i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM when SOM VCC is off. This is an optional power and required only if RTC functionality is used.

Important Note: All carrier board power supplies should be powered ON only after the i.MX 8M Mini or i.MX 8M Nano SoC is powered ON completely in the i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM. This is to ensure that there is no back voltage (leakage) from any supply on the board towards the i.MX 8M Mini or i.MX 8M Nano SoC IO pins.

3.1.2 Power Output Specification

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board has dedicated power regulator to provide +5V power to μ Qseven SOM for VCC power supply. Also +3V RTC power from coin cell holder is provided to μ Qseven SOM for Real time clock support.

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board also shares on board +5V, +3.3V and +1.5V power to Expansion connector3 for Add-On Module power.

Table 17: Power Output Specification

| Sl. No. | Power Rail | Min (V) | Typical (V) | Max(V) | Max Output Current (mA) |
|---|------------|---------|-------------|--------|-------------------------|
| Power to μQseven SOM (through Qseven MXM connector) | | | | | |
| 1 | VCC_5V_SOM | 4.85V | 5V | 5.15V | 4000mA |
| 2 | VRTC_3V0 | 2.8V | 3V | 3.3V | - |
| Power to Add-On Module (through Expansion connector3) | | | | | |
| 2 | VCC_5V | 4.85V | 5V | 5.15V | 1500mA |
| 3 | VCC_3V3 | 3.15 | 3.3 | 3.45 | 1000mA |
| 3 | VCC_1V5 | 1.35 | 1.5 | 1.65 | 500mA |

3.2 Environmental Characteristics

3.2.1 Environmental Specification

The below table provides the Environment specification of i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform.

Table 18: Environmental Specification

| Parameters | Min | Max |
|---|-----|------|
| Operating temperature range (Commercial) ¹ | 0°C | 60°C |
| Storage temperature range | 0°C | 60°C |

¹ iWave only guarantees the component selection for the given operating temperature.

3.2.2 RoHS Compliance

iWave's i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform is designed by using RoHS3 compliant components and manufactured on lead free production process.

3.2.3 Electrostatic Discharge

iWave's i.MX 8M Mini or i.MX 8M Nano Qseven Development Platform is sensitive to electro static discharge and so high voltages caused by static electricity could damage some of the devices on board. It is packed with necessary protection while shipping. Do not open or use board except at an electrostatic free workstation.

3.3 Mechanical Characteristics

3.3.1 i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board Mechanical Dimensions

The i.MX 8M Mini or i.MX 8M Nano Qseven Carrier board PCB form factor is Nano ITX with 120mm x 120mm. Qseven Carrier Board mechanical dimension is shown below.

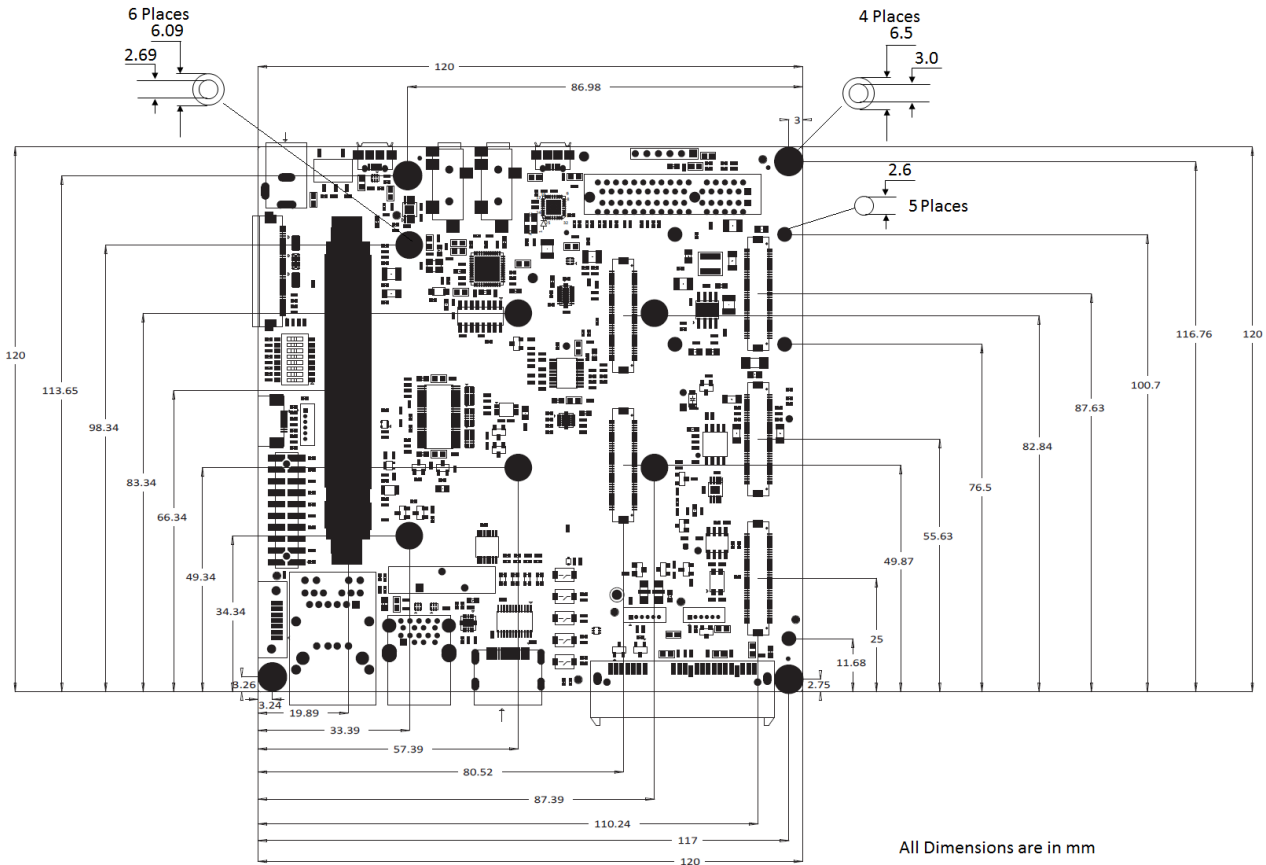

Figure 25: i.MX 8M Mini or i.MX 8M Nano Qseven Carrier board Mechanical dimension – Top View

The i.MX 8M Mini or i.MX 8M Nano Qseven carrier board PCB thickness is $1.6\text{mm} \pm 0.1\text{mm}$, top side maximum height component is Ethernet Jack (23.24mm) and bottom side maximum height component is Ground Test Point (5.59mm). Please refer the below figure for height details of the i.MX 8M Mini or i.MX 8M Nano Qseven Carrier Board.

3.3.2 Guidelines to insert the μ Qseven SOM into Carrier Board

- Make sure that power is not provided to the carrier board.
- Insert the μ Qseven module in to the MXM connector as shown below in the below images.
- Make sure that the Notch position of μ Qseven module is proper while inserting.

Figure 27: μ Qseven SOM Insertion Step -1

- Insert M2.5x12mm pan head screw from i.MX 8M Mini or i.MX 8M Nano Qseven carrier board bottom side as shown below.

Figure 28: μ Qseven SOM Insertion Step -2

- Tighten the M2.5 x 5mm threaded metallic hex spacer into the inserted screw from Carrier board top side and insert the i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM into the carrier board through the M2.5mm screw as shown below.

Figure 29: μ Qseven SOM Insertion Step -3

- Finally, tighten the M2.5mm nut into screw as shown below.

Figure 30: μ Qseven SOM Insertion Step -4

4. ORDERING INFORMATION

The below table provides the standard orderable part numbers for Qseven Development Platform which includes i.MX 8M Mini or i.MX 8M Nano μ Qseven SOM and Qseven carrier board.

Table 19: Orderable Product Part Numbers

| Product Part Number | Description | Temperature |
|---|--|-------------|
| Rainbow G34D – i.MX 8M Mini μQseven Development Kit | | |
| iW-G34D-Q704-4L002G-E008G-LCA | i.MX 8M Mini Quad, 2GB LPDDR4, 8GB eMMC flash, 1xEthernet, Linux Kit with display | Commercial |
| iW-G34D-Q704-4L002G-E008G-LCB | i.MX 8M Mini Quad, 2GB LPDDR4, 8GB eMMC flash, 1xEthernet, Linux Kit without display | Commercial |
| iW-G34D-Q704-4L002G-E008G-ACA | i.MX 8M Mini Quad, 2GB LPDDR4, 8GB eMMC flash, 1xEthernet, Android Kit with display | Commercial |
| iW-G34D-Q704-4L002G-E008G-ACB | i.MX 8M Mini Quad, 2GB LPDDR4, 8GB eMMC flash, 1xEthernet, Android Kit without display | Commercial |
| Rainbow G37D – i.MX 8M Nano μQseven Development Kit | | |
| iW-G37D-Q704-4L001G-E008G-LCA | i.MX8M Nano Quad, 1GB LPDDR4, 8GB eMMC flash, Linux Kit with display | Commercial |
| iW-G37D-Q704-4L001G-E008G-LCB | i.MX8M Nano Quad, 1GB LPDDR4, 8GB eMMC flash, Linux Kit without display | Commercial |

Note: For Development platform identification purpose, Product part number is pasted as Label with Barcode readable format.
